

**At Tooled Up, we believe in expertise.**

So this week we're asking, how can we prepare our children to be the experts of the future, and how do we support them in areas where we might not be experts ourselves?

Building the experts of the future begins with cultivating their curiosity from a young age. Tooled Up offers packs featuring fabulous scientific questions to get young minds thinking, complete with answers for grown-ups to discuss. These [20 Questions for Bathtime](#) are written for younger children, while our [Learning Through Intrigue](#) and [Questions For The Car](#) activities will suit all ages. These [Questions For Curious Teens](#) are more representative of matters related to senior-school science or those taking GCSEs.

You can also bring a bit of science investigation into your next holiday with our Beach Science activities for [primary-aged children](#) and [teens](#).

Who better to engage young people in discussions about all the things you can 'do' with science, than a supercar engineer? Ella Podmore (MBE) answers parents' and pupils' questions in this inspiring [podcast](#).

Once your children are hooked on all things science, follow up with this [book list](#) of accessible and informative science books for children: perfect for the library of the young scientists and engineers in your home.

Do you know that one of the greatest levers for academic achievement is the quality of dialogue in our homes? Do you know that great questions can open up children's thinking? So, how do we do that? Emma Leeson is going to talk us through some ideas in this webinar on [Philosophy for Children](#), on **May 20th, 19:00 BST**. Emma will be sharing ways to philosophise at home and modelling how to have stimulating conversations with children in multiple ways! Not to be missed!
